- **Tools:** Component one studio (Crystal reports), Microsoft SQL server, Visual Studio, GitHub.
- **Programing Language:** C# and ASP.NET [VB & C#].
- **Database Language:** SQL/T-SQL.
- **RDBMS:** SQL Server.
- **Other Skills:** HTML/CSS, JavaScript.

## Professional Experience:

**Work Experience 1:** - APRIL 2021 – Present date

**Current Organization:** - Hewlett Packard Enterprise GlobalSoft Private Limited

**Current Designation:** - IT Developer/Engineer II

**Project:** - PartSurfer

**Project Description:** - Partsurfer is a Web application that is used by field engineers to check the part availability and component details for any product. Based on the Part\Serial number engineers can see matching spare Parts and add them to their cart to purchase these items on the enterprise Part store [WWEPS] website.

**Used Technologies – C#\VB, ASP.NET, SQL\T-SQL and MVC Architecture**

**Project:** - Easitool

**Project Description:** - Easitool is a Global Sales Order and Part Status and Escalations workflow management webtool. It is an escalations webtool for sales orders in all phases of delivery. This allows issue trackability and history for congruent info regarding a sales order across organizations. It also can create a coupled workflow between teams with the sub ticket capability. There is a live connection to each of the ordering systems (SAP). It also displays part inventory availability without requiring direct system access.

**Used Technologies – Classic ASP, SQL\T-SQL And HTML\CSS\JavaScript**

**Project:** - Global iReturns

**Project Description:** - iReturns is a dispositioning tool responsible for taking care of the reverse logistics. Any part or material which is being returned to HPE, in this iRteurns will come into picture. iReturns communicates with SAP to obtain data pertinent to material received and determines the part/material disposition method. This returned Material can be both defective (used) or good (unused).

**Used Technologies – ASP.Net, C#, SQL\T-SQL And HTML\CSS\JavaScript**

#### Responsibilities:

- Communication with Business and Requirement Gathering.
- As part of enhancement team, Responsible for implementing new Features and enhancement for assigned project.
- Involving in data center application migration activity.
- Tested entire application manually.
- Manage Staging and Production code Deployment.
- Maintain source code in GitHub.

**Work Experience 2:** - SEPTEMBER 2017 – April 2021

**Organization Name:** - Conduent Business Services (XEROX) Bangalore

**Designation:** - Application Development & Support Engineer 1

**Project:** - PUBLIC SAFETY SOLUTION (CITEWEB).

**Project Description:** -

Public safety solution is an automated photo enforcement program. The Photo Enforcement application deals with traffic violation (Like: Red Light, Speed and Radar Enforcement Violations) committed by vehicles. The cite-net application captures all violation events and process them further for the cite-web application. Cite-web application shows the citation details to officer, then the officer processes these citations to multiple queues (Like: Verify, DMV Verify, Police Approval) to generate the citation notice for the violator. Then violator can pay the fine or can appeal for court hearing. In the court Judge can view the appeal citation details in Cite-web Court queue. And here violator can proof his innocence or can pay the fine for the ticket (Citation).

#### Responsibilities:

- Communication with Client and Requirement Gathering.
- Assigning Task to team members and Provide Guidance to teammates for their work.
- Work on production issue like Payment and Functionality.
- Implementing new Features for existing clients. And single handedly configure new client.
- Worked on crystal report tools to generate dynamic notices and reports for clients.
- Worked on Payment issue like- developing and fixing payment logic for clients and other payment related issues.
- Setting up consolidated client data metrics for 50+client's for Conduent R&D department to calculate project revenue.
- Changes manual processes to automated process through c# exe's and web applications.
- Maintain database for clients like Server performance, SQL jobs and Firewall issue for the application.
- Training juniors for the application and providing guidance to them.
- Tested entire application manually.

**Used Technologies – C#, ASP.NET, SQL/T-SQL, HTML/CSS, JavaScript**
